I'm in the Revised Total Coliform Rule training webinars. Thinking it might be a little bit overkill for my purposes, but we'll see.

I don't see how any discussion changes the direction, so I'm not tracking. Would prefer to be very clear with them, but can go with whatever.

What training are you in? I can see her point in not wanting to give them a direction until we have a discussion with them first.

Diane,

I received comments from Karen yesterday on the Pretty Prairie letter. She suggests deleting the sentences on the attached that I've highlighted in yellow below. I've not had a chance to speak with her yet, but hope to do so today.

Maybe we could discuss if you have a chance. I'm supposed to be in training today - Thurs 11:30 - 3:30 (arrrrgghh).

Thanks  
Scott

We are unaware of any specific actions that the town has initiated over the past several years to abate the nitrates in its drinking water. If the town has taken any actions or is planning to take any actions to reduce nitrate levels in its drinking water to meet EPA's Maximum Contaminant Level of 10 mg/L, please advise EPA of those actions. EPA's goal is to ensure that the town takes action within a reasonable time frame to address the nitrate contamination in its water. In order to ensure that such actions come to pass, we believe that Pretty Prairie should enter into an enforceable agreement with either the KDHE, or the EPA.
